inspiring CNC education...

HTEC Vision

Haas Automation Inc.-USA and Haas Automation Europe-Belgium, foresee a time when young people will be stimulated by the possibility of pursuing careers in the engineering, designing, development and manufacturing of the broad spectrum of technologies and products that sustain man's existence on earth.

By way of Haas Technical Education Centers – HTEC's, strategically placed throughout Western, Central and Eastern Europe, including all Russian speaking countries, equipped with 'State of Art' CNC machines tools and all relevant supporting technologies, young people will be attracted to train for careers in the manufacturing industries.

The HTEC concept demonstrates to young people that today's manufacturing is, in fact, performed in clean and pleasant 'Hi-Tech' working environments that involve 'making-things' by employing a wide spectrum of advanced technologies to produce critical products, with processes that can truly be described as 'Hi-Tech'.

HTEC's will contribute to young people gaining opportunities to enter a challenging and rewarding career in the manufacturing industries and will provide local companies with a steady supply of well qualified CNC technologists, who in turn will become the manufacturing leaders and entrepreneurs of the future.

HTEC's will demonstrate to young people that they can access an extremely wide spectrum of very interesting career opportunities in manufacturing and that they can indeed make valuable, practical, contributions to re-engineering the planet for mankind's prosperity and sustainable future.

HTEC's will also demonstrate to female students that there is absolutely nothing in regard to Hi-Tech manufacturing that they cannot accomplish and that they, also, may become manufacturing technologists and have very rewarding careers in the manufacturing industries.

The HTEC network will make an important contribution toward the health and sustainability of local economies throughout Europe.
